## VE216 Lecture 16

Fourier Transform

#### **Fourier Series**

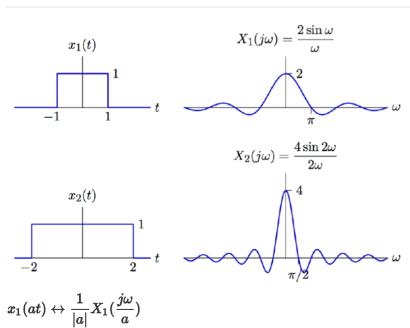

• Analysis equation:  $X(j\omega)=\int_{-\infty}^{\infty}x(t)e^{-j\omega t}dt$ • Synthesis equation:  $x(t)=rac{1}{2\pi}\int_{-\infty}^{\infty}X(j\omega)e^{j\omega t}d\omega$ 

$$E(\omega) = X(j\omega)$$

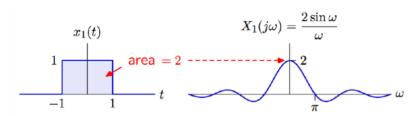

# **Relation between Fourier and Laplace Transforms**

Property	x(t)	X(s)	$X(j\omega)$
Linearity	$ax_1(t)+bx_2(t) \\$	$aX_1(s)+bX_2(s)\\$	$aX_1(j\omega)+bX_2(j\omega)$
Time shift	$x(t-t_0)$	$e^{-st_0}X(s)$	$e^{-j\omega t_0}X(j\omega)$
Time scale	x(at)	$\frac{1}{ a }X\left(\frac{s}{a}\right)$	$\frac{1}{ a }X\left(\frac{j\omega}{a}\right)$
Differentiation	$rac{dx(t)}{dt}$	sX(s)	$j\omega X(j\omega)$
Multiply by $t$	tx(t)	$-\frac{d}{ds}X(s)$	$-\frac{1}{j}\frac{d}{d\omega}X(j\omega)$
Convolution	$x_1(t) * x_2(t)$	$X_1(s) \times X_2(s)$	$X_1(j\omega) \times X_2(j\omega)$

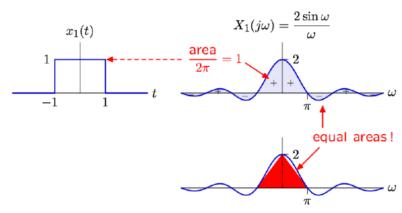

# **Fourier Transform Property**

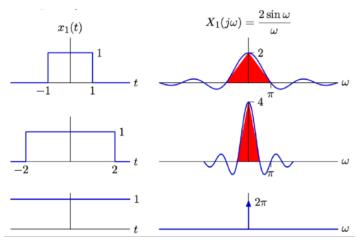

#### **Moments**

Since  $X(j\omega)=\int_{-\infty}^\infty x(t)e^{-j\omega t}dt$  , then  $X(0)=\int_{-\infty}^\infty x(t)dt$  , and here we get 2 as result.

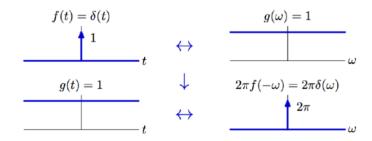

Then  $x(t)=rac{1}{2\pi}\int_{-\infty}^{\infty}X(j\omega)e^{j\omega t}d\omega$  , so  $x(0)=rac{1}{2\pi}\int_{-\infty}^{\infty}X(j\omega)d\omega=1$  , or  $\int_{-\infty}^{\infty}X(j\omega)d\omega=2\pi$  .

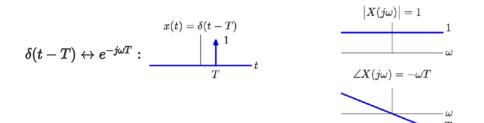

### **Duality**

$$x_1(t) = f(t) \leftrightarrow X_1(j\omega) = g(\omega)$$
 
$$\omega \to t \qquad \qquad t \to \omega \; ; \; \; \mathsf{flip} \; ; \quad \times 2\pi$$
 
$$x_2(t) = g(t) \leftrightarrow X_2(j\omega) = 2\pi f(-\omega)$$

## **Other Impulses**

$$X(j\omega) = \int_{-\infty}^{\infty} \delta(t-T)e^{-j\omega t}dt = e^{-j\omega T}$$

#### **Relation between Fourier Transform and Fourier Series**

$$x(t) = x(t+T) = \sum_{k=-\infty}^{\infty} a_k e^{j\frac{2\pi}{T}kt} \quad \begin{array}{c} \mathsf{CTFS} \\ \longleftrightarrow \end{array} \qquad \{a_k\}$$

$$x(t) = x(t+T) = \sum_{k=-\infty}^{\infty} a_k e^{j\frac{2\pi}{T}kt} \quad \begin{array}{ccc} \mathsf{CTFT} & \sum_{k=-\infty}^{\infty} 2\pi a_k \delta & \omega - \frac{2\pi}{T}k \end{array}$$
